DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8 and 18-25 are, drawn to measuring the surface motion of each portion of an object surface by determining a plurality of measurement points in an image of said object of a first and a second unit image and repeating, classified in class 382, subclass 107.
 - II. Claims 9-17 and 26-28 are, drawn to measuring surface motion for measuring motion of each portion of an object by representing the position, transforming the first and second unit images, generating from mesh model a plurality of coarse mesh models, obtaining overlay images by overlaying subband, and calculating cross-correlation of the texture map, classified in class 382, subclass 284 and/or 291.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the details of transforming the first and second unit images, generating from mesh model a plurality of coarse mesh models, obtaining overlay images by overlaying subband, and calculating cross-correlation of the texture map are not recited in claim 1, for example, one

of the broadest combination claims. The subcombination has separate utility such as measuring surface motion for measuring motion of each portion of an object from a sequence of unit images of the object including first and second unit images, comprising: representing the position of each portion of the object surface, transforming the first and second unit images, generating from mesh model a plurality of coarse mesh models, obtaining overlay images by overlaying subband, and calculating cross-correlation of the texture map.

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
